

# CAREPLUS REPORTING MODULE

powered by fusion

## Key Benefits:

- Detailed Message and Alarm Reports
- Enhance Patient and Staff Safety
- Improve Staff Efficiency
- Dashboard and Business Intelligence (BI) options
- Deliver Operational and Cost Efficiency
- Record Critical Operational Data
- Multi-Site Remote Access
- Easy to Use Interface
- Single ward, multi ward, multiple site reports
- Customise reports for ward specialisation – maternity, geriatric etc.

## CarePlus Reporting Module

The CarePlus Reporting Module collects and stores data to a PC on the hundreds of events that occur throughout your facility every day. Reports can be generated on either the messages or alarms that are sent and registered by the Fusion Series system.

## Multiple Sites / Remote Access

The Devices configuration dialog in the Reporting Module lets users add CarePlus devices to the system. Using a standard HTML browser, users with the relevant security privileges can access the Reporting Module, select a device and run a report. This means that even a Healthcare group comprised of facilities anywhere in the world can access any of their sites via the Internet.

## Get The Right Information

When running a report via the module, filters can be applied so that only the information that is needed appears on the finished report. For example, when running a message report, management are able to filter by Time, by User, by text in the message, by Recipient and more.

## Monitor and Manage Every Event

The Reporting Module monitors the alarms and messages that travel to and from your communications devices through your Fusion Series solution. These message and alarm events are stored in a PC server database; giving management access to the information in an at-a-glance report format.

## Message Reporting

The Reporting Module lets you generate detailed reports on the messages that have been sent and received across the facility via the CarePlus.

## Alarm Reporting

Alarm Reports contain information on the alarm events generated throughout the system. An example as shown in fig 3 over.

## Versatile Report Interface

The information displayed in both the Messages and Alarms Report dialog can be expanded or collapsed to display or hide elements of the report. Standard SQL database enables easy customisation of reports to meet clinical requirement for specialised wards.

## Export Data

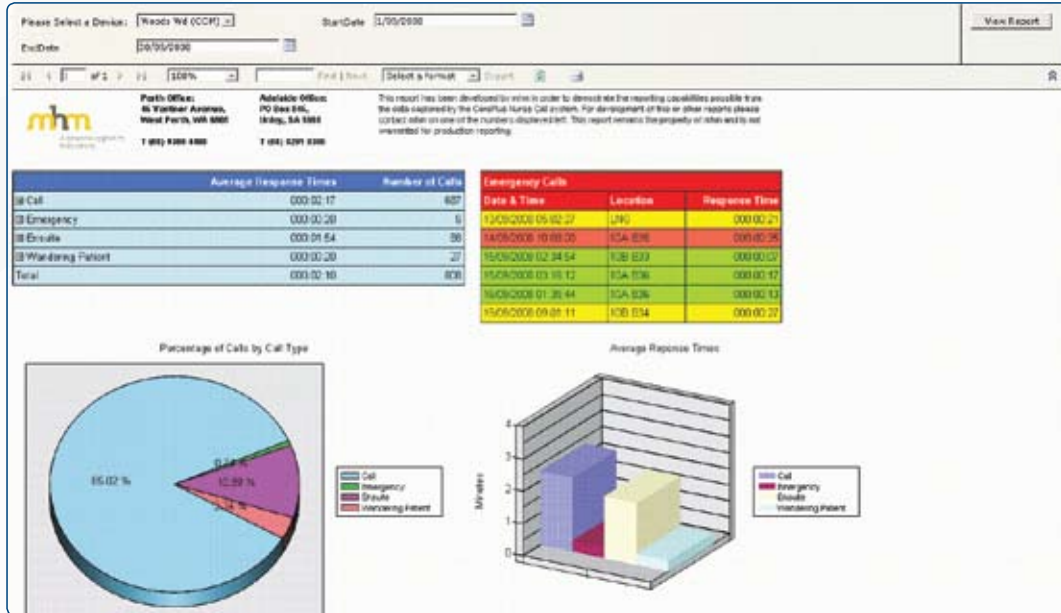

Using the standard report display window, data can be zoomed, reformatted and exported for use in an external spreadsheet or database program. The Export function also allows users to export the report to PDF format for printing.

## Password Protection

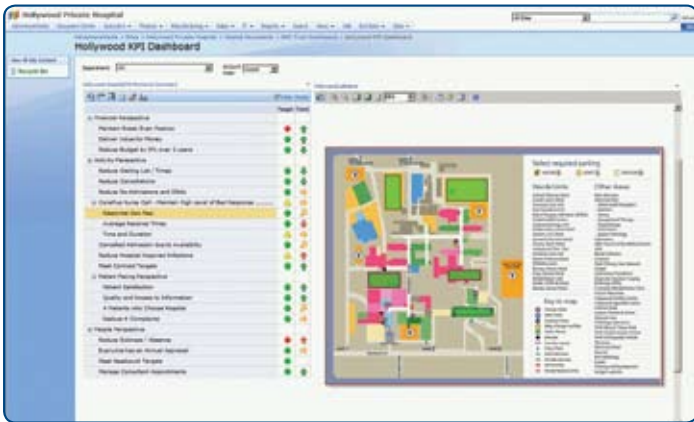

In order to access the data generated by the CarePlus Reporting Module, a user name and password must be provided. Administration features allow staff to be granted access to only Alarm reports, only Messages reports or both.
