

WHITEBOARD MODULE

Features:

- The Whiteboard can be configured for “Text” or “Graphic” display modes.
- The Text Style used on the display can be configured.
- The Whiteboard will display a standby image and system time when there are no active alarms. (Default is CarePlus Logo. Can use custom image if desired)

In Graphic Mode:

- Up to 24 rooms can be displayed on the whiteboard.
- Alarms are displayed based on location and each room container is color coded according to the highest priority alarm. The color comes from the Sign Color configuration for the Priority.

In Text Mode:

- The alarms are ordered by priority.
- The assignment column refers to the staff member currently assigned to the alarm based on the staff allocation schedule.
- The status column refers to the status of the message generated to staff members based on the staff allocation schedule.

Whiteboard Module

The Whiteboard Module provides an interface in text and graphical format for all active alarms within the system. The interface is provided through a web browser and can be used on a PC with a dedicated wide screen monitor.

The Whiteboard Module is a separately licensed option. You will need a new license key to activate the whiteboard module.
